

The Patient's Journey Through Maternal Infant Care

55+
YEARS

For more than 55 years, **GE has partnered with health care providers** to offer extraordinary healthcare for mothers and babies.

No one understands the innovative GE technology better than we do, that is why **our entire portfolio of clinical accessories is designed or selected by the same people who make the devices themselves.**

Clinical Accessories like the **GE transducers, fetal scalp electrodes,** and **Blood Pressure cuffs** help monitor the health of both mother and baby during the birthing process.

The **GE Bilisoft phototherapy blanket** portfolio and **T-Piece Resuscitation Circuits** support you as you care for even the smallest patients in the nursery or NICU.

When it matters most, choose **GE Clinical Accessories** to connect the patients you care for, to the equipment you trust.

Trusted. Reliable. Simple.
